

ASenco **COVER BALLS**®

WE'VE GOT YOU COVERED

Open waters near airports and the bird strikes they cause pose a serious threat to passenger safety. But now there is a simple, reliable, cost-effective and environmentally-friendly solution: ASenco **COVER BALLS**®.

ASenco **COVER BALLS**®: THE SIMPLE, RELIABLE AND COST-EFFECTIVE SOLUTION FOR ELIMINATING BIRD STRIKES.

ASenco **COVER BALLS**® by ASenco drastically reduce the risk of bird strikes during take-off and landing by covering and camouflaging nearby ponds, lakes, reservoirs, flood catchments and other forms of open water.

WHY CHOOSE ASenco **COVER BALLS**® ?

- Proven effectiveness against bird strikes
- Flexible, customisable solution
- Low manufacturing, filling and installation costs
- UV-resistant, long-lasting and practically unbreakable
- Environmentally-friendly system and materials

HOW DO I GET ASenco **COVER BALLS**® ?

Contact us today for a non-binding assessment of your specific requirements. We will propose you a range of solutions designed to boost the safety of your airport.

WHAT ARE ASenco **COVER BALLS**® ?

ASenco **COVER BALLS**® are long-lasting, fully recyclable PET balls, which are partially filled to resist wind and laid in a dense layer over the water's surface. The balls can be customised in shape, colour and texture to match the surrounding landscape. They can even be filled under pressure to resist external impact. And because they are manufactured and filled using existing bottling lines, ASenco **COVER BALLS**® are an extremely flexible and cost-efficient solution!

HOW DO ASenco **COVER BALLS**® WORK ?

ASenco **COVER BALLS**® form a physical barrier over the entire surface of any nearby pool of water, while also camouflaging it from the air. The balls form an unstable and uncomfortable surface for any birds that may attempt to land on them, while leaving the underlying ecosystem unharmed.
